

A. Different target-data access

SOURCE-ONLY inductive concat
 · fit on SOURCE only
 · transform TARGET

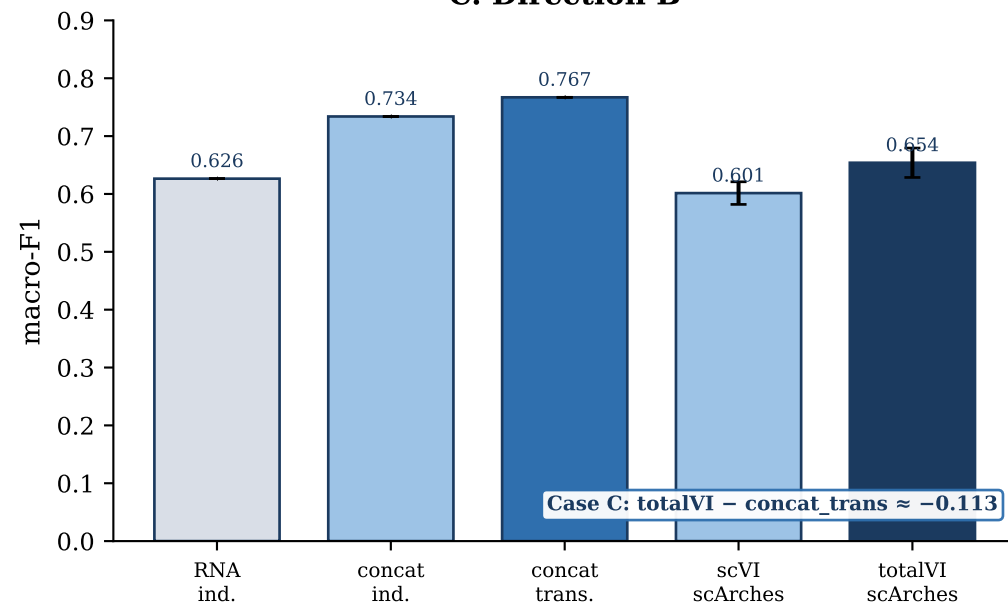

scVI / totalVI (scArches)
 · unlabeled TARGET features
 used in query adaptation

Target-data-access-matched
 transductive concat (new)
 · joint unsupervised fit on
 SOURCE + unlabeled TARGET
 · FEATURE ACCESS matched only
 · NOT algorithmically identical

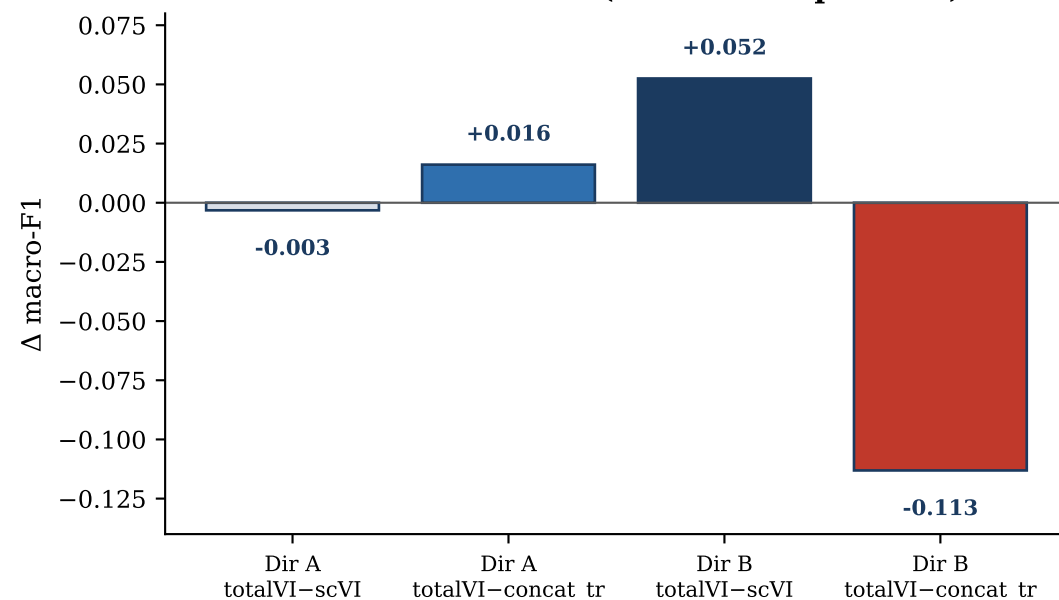

B. Direction A

C. Direction B

D. Case C contrasts (direction-dependent)

Matched target-feature access does not yield a stable totalVI advantage
