

A. Lawlor design

10 biological donors
5 folds · 10 seeds/fold
Primary unit = DONOR

Author labels are
protein-gated.

B. Per-donor paired F1 (10/10)**C. Donor Δ F1 (mean $\approx +0.090$)****D. Methods (protein baselines highest)****E. Uncertainty AUROC****F. Selective areas**

Author labels are protein-gated: strong protein PCA / concat performance indicates label-modality alignment, not universal totalVI superiority.
