

PHASE 11 uncertainty taxonomy

A. Latent posterior $q(z|x)$, one fixed model

UNSUPPORTED for target cells
adapted query model not saved
(source-side scVI only)

B. Predictive source-trained classifier

PRIMARY
 $U_{pred} = 1 - p_{max}$
entropy, margin

C. Model-seed ensemble 5 PHASE 10 seeds

$H(\bar{p}) - \overline{H(p^{(s)})}$
variation ratio

D. Source-subset 5 PHASE 10B subsamples

variation ratio
true-class prob. SD

kept separate throughout — never combined into one reliability index (§48)
